HIGH-PRECISION, SPEED & LARGE WORKING AREA

HIGH-PRECISION STRUCTURE

Moving Column

The FD Series is designed with a moving column in order to maximize productivity of the incorporated Dual Table. In addition, due to the enlargement of the column's width and symmetrical heat behavior column structure, heat displacement is minimized and machining accuracy is increased.

GUIDE WAY

Double Anchored Ballscrew

In order to eliminate thermal growth and increase accuracy, all axes are driven by high precision double anchored ballscrews. The double anchored and pretensioned design provides outstanding positioning and repeatability with virtually no thermal growth.

F410D	X/Y/Z Axis	-	-
F500D	-	X/Y Axis	Z Axis
F500DM/F600D	-	X/Y/Z Axis	-

The FD series is designed with an optimized slideway that considers the characteristics of the model to optimize the transfer performance.

02 SPINDLE & ATC

Excellent Machining Performance with High-precision Spindle & ATC

SPINDLE

Direct Type Spindle (F500D/500DM/600D)

The spindle motor is directly connected to the main spindle by a high speed and high precision coupling.

Rapid spindle acc/deceleration is performed without backlash. The coupling also minimizes vibration and heat transfer from the motor preventing thermal displacement.

Belt Type Spindle

The FD Series is equipped with a Belt Type Spindle to ease maintenance and minimize machining noise.

The main spindle is designed with P4 Angular Contact Ball Bearings to assure quality during high speed processing, also to stabilize high precision even over long periods of machining.

Spindle Cooling **OPTION**

The spindle cooling system minimizes thermal displacement which can happen during lengthy machining operations, and offers continued accuracy based on the thermal stability.

Direct Type Spindle

Belt Type Spindle

THROUGH SPINDLE COOLANT **OPTION**

Through Spindle Coolant is exceedingly useful when drilling deep holes. It helps increase the lifetime of the tool, while decreasing cycle time.

20 bar / 30 bar / 70 bar

ATC & MAGAZINE

ATC

Position control through the Twin Arm ATC on Servo Motors has improved drastically. The twin arm ATC makes it possible for faster tool change and increased productivity.

Magazine

The tool magazine holds 24 tools as standard and 30 tools as an option. Random access allows faster tool change and increase in productivity.

(F500DM : 30EA Std.)

BT40	300 mm (11.8")	8 kg (17.6 lb)	Ø90/Ø150 mm (Ø3.5"/Ø5.9")

TABLE

Dual Table

High productivity is achieved by the dual table which enables workers to setup a new workpiece while the machine is processing. Especially, the rotary table is designed for the simpler positioning by the location pin due to the application of hydraulic methods.
